

PROJECT - 3

This project is testing the <http://demowebshop.tricentis.com/>

- *There are 2 functionalities you should be testing.*
- *Test these 2 functionalities with Selenium and Java.*
- *Use explicit wait as much as you can!*
Try to not use Thread.sleep.(You will need a lot of waits for this website!
BE CAREFUL :))
- **Pre-Condition:** *Create an account on the page before starting to automate and use that account for automation.*

Automate Following Test Scenarios

SCENARIO 1 | Login Functionality Test - Positive Scenario:

- You should navigate to the Login page and try to login with valid credentials.
- Expected Result is successfully login!

SCENARIO 2 | Login Functionality Test - Negative Scenario:

- You should navigate to the Login page and try to login with invalid credentials.
- Expected Result is **"Login was unsuccessful. Please correct the errors and try again."**
 - **"No customer account found"** message should be displayed. Validate this message is displayed and validate text.

SCENARIO 3 - Place an Order:

- You should navigate to the website and login to your account.
- You should select a product from HomePage and add to cart
- You should complete proceed to checkout process
- At the end you should verify the following success message! **"Your order has been successfully processed!"**
